

Hadrian's Wall World Heritage Site Management Plan Archaeological Research Draft 2008-14 Action Plan

Policies	Ongoing Actions	Actions 2010	Actions Post 2010
Policy 6a: The Hadrian's Wall Research Framework should be used to prioritise archaeological fieldwork to mitigate threats to archaeological remains if <i>in situ</i> preservation of such areas at risk is not possible.	1. Develop and implement plans to record the archaeology where protection is not possible, and to publish the results fully.		
	2. Implement measures to conserve vulnerable sites where possible.		
Policy 9a: A programme of on-going survey, fieldwork and analytical research will be developed to take forward projects and priorities identified in the Research Framework.		1. Develop and implement a GIS programme for the WHS that is informed by and builds on existing GIS operated by stakeholders	
	2. Co-ordinate action to maximise the knowledge yield from sites being damaged by erosion		
	3. Carry out strategic excavations of a range of site-types		
		4. Identify the precise course of the Wall and the boundaries of its installations in the West using all appropriate techniques, including a complete set of geophysical surveys for the principal Wall and Stanegate sites	
	5. Make resources available for aerial reconnaissance whenever the conditions are suitable.		
Policy 9b: Organisations with responsibilities and commitments to develop and implement research along Hadrian's Wall will work in partnership and co-ordinate their activities wherever possible	1. Set up a forum to provide liaison for research activity throughout the WHS		
		2. Develop a co-ordinated approach to seeking funding for an on-going Wall-wide programme of fieldwork and analytical research	
Policy 9c: Wherever possible, non-invasive methods of archaeological investigation should be used in preference to excavation.	Continue application of agreed principle		

Policies	Ongoing Actions	Actions 2010	Actions Post 2010
Policy 9d: Archaeological excavation will be undertaken under guidance from the Archaeological Research Framework	Continue application of agreed principle		
Policy 9e: Archaeological excavation will only take place where there is adequate provision for post-excavation, publication and the conservation of finds	Continue application of agreed principle		
Policy 9g: Wherever possible opportunities will be sought to engage local people and visitors in the research process	1. Create opportunities to involve local people and visitors in the research process		
Policy 9h: The results of all research will be publicly accessible.	2. Communicate the results of research in accessible, informative and imaginative ways.		
Policy 13b: WHS managers should follow a programme of proactive engagement to establish a better understanding of local community groups and interests.			
ARF C) All existing archaeological research data related to Hadrian's Wall will be properly recorded, managed, modelled and disseminated.		<p>4. Investigate potential for an archaeological heritage programme (both Roman and non Roman) involving local communities in events, workshops and fieldwork, provided these are justified in research terms, properly resourced and organised (see Issue 9).</p> <p>1. Undertake an audit of all existing material.</p> <p>2 Address the publication of the backlog of unpublished research.</p> <p>3. Undertake modern scientific analysis of all curated material.</p>	
ARF H) A proactive approach will be made to knowledge transfer and succession planning in respect of archaeological skills and expertise.		<p>1. Identify specialisms which capacity needs to be developed.</p> <p>2. Provide appropriate training to develop specialists in small finds, environmental and pottery and in other areas of shortage which may be identified.</p>
